

## Chapter-25

# Coordination Chemistry (IUPAC Nomenclature)

Arijit Das

Department of Chemistry, Bir Bikram Memorial College, Agartala, Tripura, India

Email: [arijitdas78chem@gmail.com](mailto:arijitdas78chem@gmail.com)

The first comprehensive system of nomenclature was suggested by the Alfred Werner. Later on (2005) this was modified by the International Union of Pure and Applied Chemistry (IUPAC).

In order to name coordination compounds certain rules have been framed by IUPAC.

(i) The **positive part** of a coordination compound is **named first** and is **followed** by the name of **negative part**.

(ii) The **ligands** are **named first** followed by the **central metal**. The **prefixes di-, tri-, tetra-** etc, are **used** to indicate the number of each kind of **monodentate ligand** present. The **prefixes bis (two ligands), tris (three ligands), etc.** are **used** when the ligands are **polydentate (bidentate, tridentate etc.)** e.g. dipyridyl, diethylene diamine.

(iii) The **ligands** are **named in alphabetical order**. Names of the **anionic ligands** end in 'O', those of **cationic** in 'ium'. **Neutral ligands** have their **regular names** except that  $\text{H}_2\text{O}$  is named as aqua,  $\text{NH}_3$  as ammine,  $\text{NH}_2$  as amido, NO as nitrosyl and CO as carbonyl (**Table 1 & 2**).

**Table 1: IUPAC naming of Neutral Ligands**

| Ligand                                         | IUPAC Name      |
|------------------------------------------------|-----------------|
| $\text{H}_2\text{O}$                           | aqua            |
| $\text{NH}_2$                                  | amido           |
| $\text{NH}_3$                                  | ammine          |
| $\text{C}_6\text{H}_6$                         | benzene         |
| CO                                             | carbonyl        |
| NO                                             | nitrosyl        |
| $\text{C}_5\text{H}_5\text{N}$                 | Pyridine        |
| $(\text{C}_5\text{H}_4\text{N})_2$             | 2,2'-bipyridine |
| $\text{H}_2\text{NCH}_2\text{CH}_2\text{NH}_2$ | ethylenediamine |

**Table 2: IUPAC naming of *Anionic Ligands***

| Ligand                                  | IUPAC Name                         |
|-----------------------------------------|------------------------------------|
| $F^-$                                   | fluoro                             |
| $Cl^-$                                  | chloro                             |
| $Br^-$                                  | bromo                              |
| $I^-$                                   | iodo                               |
| $CO_3^{2-}$                             | carbonato                          |
| $CN^-$                                  | cyano                              |
| $H^-$                                   | hydrido                            |
| $O^{2-}$                                | oxo                                |
| $O_2^{2-}$                              | peroxo                             |
| $OH^-$                                  | hydroxo                            |
| $O_2H^-$                                | perhydroxo                         |
| $NO_2^-$                                | nitro                              |
| $ONO^-$                                 | nitrito                            |
| $NO_3^-$                                | nitrate                            |
| $C_2O_4^{2-}$                           | oxalato ( <i>ox</i> )              |
| $SO_4^{2-}$                             | sulphato                           |
| $SO_3^{2-}$                             | sulphito                           |
| $S^{2-}$                                | sulphido or thio                   |
| $SCN^-$                                 | thiocyanato                        |
| $N_3^-$                                 | azido                              |
| $S_2O_3^{2-}$                           | thiosulfato                        |
| $NHOH^-$                                | hydroxylamido                      |
| $(CH_2COO)_2N(CH_2)_2N(CH_2COO)_2^{4-}$ | ethylenediaminetetraacetato (EDTA) |

(iv) When a **complex species has negative charge (anionic complexes)**, the name of the **central metal ends in ‘ate’**. For some elements, the ion name is based on the Latin name of the metal (eg argentate for silver) (**Table-3**). In case of **cationic and neutral complexes** simply write the metal name without addition of suffix ‘ate’.

**Table 3: IUPAC naming of *Metal atom in anionic complexes***

|           |           |           |          |           |           |           |           |
|-----------|-----------|-----------|----------|-----------|-----------|-----------|-----------|
| <i>Fe</i> | Ferrate   | <i>Cu</i> | Cuprate  | <i>Ni</i> | Nicklate  | <i>Pt</i> | Platinate |
| <i>Ag</i> | Argentate | <i>Au</i> | Aurate   | <i>Co</i> | Cobaltate | <i>Cr</i> | Chromate  |
| <i>Sn</i> | Stannate  | <i>Pb</i> | Plumbate | <i>Zn</i> | Zincate   | <i>Ga</i> | Gallate   |

(v) The **oxidation number (state) of the central metal** is indicated in **roman numbers** in parentheses after name of the metal.

(vi) In **polynuclear complexes**, the **bridging group is indicated** in the formula of the complex by separating it from the rest of the complex by hyphens and by adding the prefix  $\mu$  before its name. The Greek letter  $\mu$  should be repeated before the name of each different bridging group. Two or more bridging groups of the same kind are indicated by **di- $\mu$ -, tri- $\mu$ -,....** etc.

*Examples based on above rules are given below:-*

### Complex Cations

### IUPAC Name

|                                                         |   |                                                    |
|---------------------------------------------------------|---|----------------------------------------------------|
| i) $[\text{Co}(\text{H}_2\text{O})_6]^{2+}$             | → | Hexaaqua cobalt (II) ion                           |
| ii) $[\text{Pt}(\text{NH}_3)_2\text{Cl}_2]\text{Cl}_2$  | → | Diamminedichloro platinum (IV) chloride.           |
| iii) $[\text{Ni}(\text{en})_3]^{+3}$                    | → | Tris (ethylenediammine) nickel (III) ion.          |
| iv) $[\text{Co}(\text{NH}_3)_5\text{Cl}]^{+2}$          | → | Pentaammine chloro cobalt (III) ion.               |
| v) $[\text{Co}(\text{NH}_3)_6]\text{Cl}_3$              | → | Hexaammine cobalt (III) chloride.                  |
| vi) $[\text{Cr}(\text{NH}_3)_4\text{SO}_4]\text{ClO}_4$ | → | Tetra ammine sulphato chromium (III) per chlorate. |

### Complex Anions

|                                                                     |   |                                                                  |
|---------------------------------------------------------------------|---|------------------------------------------------------------------|
| i) $\text{K}_4[\text{Fe}(\text{CN})_6]$                             | → | Potassium hexacyano ferrate (II).                                |
| ii) $\text{K}_3[\text{Fe}(\text{CN})_6]$                            | → | Potassium hexacyano ferrate (III).                               |
| iii) $[\text{Au}(\text{CN})_4]^{2-}$                                | → | Tetracyano aurate (II) ion.                                      |
| iv) $\text{K}[\text{AgCl}_2]$                                       | → | Potassium dichloro argentite (I)                                 |
| v) $[\text{CrF}_6]^{3-}$                                            | → | Hexafluoro chromate (III)                                        |
| vi) $\text{Na}[\text{Al}(\text{OH})_4]$                             | → | Sodium tetra hydroxo aluminate (III)                             |
| vii) $[\text{Pt}(\text{NH}_3)_4\text{Cl}_2][\text{PtCl}_4]$         | → | Tetraammine dichloro platinum (IV) tetra chloro palatinate (II)  |
| viii) <i>cis</i> - $[\text{PtBrCl}(\text{NO}_2)_2]^{2-}$            | → | <i>cis</i> -bromochlorodinitroplatinate (II) ion                 |
| ix) <i>trans</i> - $[\text{Co}(\text{OH})\text{Cl}(\text{en})_2]^+$ | → | <i>trans</i> -chlorobis(ethylenediamine)hydroxo cobalt (III) ion |

### Neutral Complexes

|                                             |   |                                  |
|---------------------------------------------|---|----------------------------------|
| i) $[\text{Co}(\text{NH}_3)_3\text{Cl}_3]$  | → | Triammine trichloro cobalt (III) |
| ii) $[\text{Pt}(\text{NH}_3)_2\text{Cl}_2]$ | → | Diammine dichloro platinum (II)  |
| iii) $[\text{Ni}(\text{CO})_4]$             | → | Tetra carbonyl nickel (0)        |

### Bridged polynuclear complexes

(i)

-  $\mu$ -hydroxo-bis{pentaammine chromium (III)}chloride.

(ii)

-  $\mu$ -amino- $\mu$ -hydroxo octaammine dicobalt (III) ion.

(iii)

-  $\mu$ -amino- $\mu$ -nitro octaammine dicobalt (III) ion.

### Related Questions

*Q. 1. Name the following*

- a.  $\text{K}_4[\text{Ni}(\text{CN})_4]$
- b.  $(\text{NH}_4)_3[\text{Fe}(\text{SCN})_6]$
- c.  $\text{Na}_2[\text{Ni}(\text{CN})_4]$
- d.  $[\text{Fe}(\text{ox})_3]^{3-}$
- e.  $[\text{Co}(\text{NH}_3)_5\text{Cl}]\text{Br}_2$
- f.  $[\text{Cr}(\text{OH}_2)_4\text{Cl}_2]\text{Cl}$
- g.  $[\text{Pt}(\text{NH}_3)_2\text{Cl}_2]$
- h.  $\text{Na}_2[\text{MoOCl}_4]$
- i.  $[\text{Cr}(\text{OH}_2)_6](\text{NO}_3)_3$
- j.  $[\text{Fe}(\text{NH}_3)_6]\text{SO}_4$
- k.  $(\text{NH}_4)_2[\text{CoCl}_4]$
- l.  $\text{Cr}(\text{NH}_3)_4\text{Cl}_2$
- m.  $[\text{Co}(\text{P}(\text{CH}_3)_3)_4]_2(\text{SO}_4)_3$
- n.  $[\text{Ni}(\text{OH}_2)_6]\text{Cl}_2$

**Q.2. Write formulas for the following**

- a. *potassium hexacyanoferrate(III)*
- b. *sodium hexafluoroaluminate(III)*
- c. *pentaaquabromomanganese(III) sulfate*
- d. *hexaamminechromium(III) nitrate*
- e. *sodium tetrahydroxochromate(III)*
- f. *hexaammineruthenium(III) tetrachloronickelate(II)*
- g. *tetraamminecopper(II) pentacyanohydroxoferrate(III)*
- h. *potassium diaquatetrabromovanadate(III)*
